## **Devils Lake Shoreline Restoration Projects**

Are you interested in improving the water quality of Devils Lake? Do you want to decrease your amount of lawn maintenance? Are you tired of battling erosion on your property?

If you answered yes to any of these, please consider taking part in the Save our Shorelines campaign. The mission of the save our shorelines campaign is to *Improve Devils Lake water quality with a focus on land immediately surrounding the lake.*

The goal of this project is to encourage homeowners to plant native vegetation instead of turf grass and rock walls on their shoreline. As homeowners native shoreline vegetation offers many benefits including, low maintenance, decrease in shoreline erosion, a beautiful natural landscape, and it saves you money! Restoration projects also benefit the lake by decreasing sediments and other pollutants that enter the lake, including cyanobacteria causing nutrients.

To kick off this campaign DLWID is looking for landowners who are interested in receiving a 75% discount on a shoreline restoration project. In addition, DLWID will contract with a professional landscaper, source the plants, recruit volunteer labor and work with you to develop a site design!

If you are interested in restoring your shoreline or volunteering for this event, please contact, Seth Lenaerts for more details at: [Seth@DLWID.org](mailto:Seth@DLWID.org) or by phone, 541-994-5330.
